The security of having the best partner.

At R&M, we demand the highest standards from our products. The same goes for our partnerships. That is why we invest a great deal in working together with our assembly partners.

Minimizing the rejection rate

Right from the product design and development stages, we are thinking about how we can make life as simple as possible for you, our customer. Cleverly and meticulously thought-out individual components and a strictly monitored high level of manufacturing quality make installation simple, fast, and secure for you. This enables errors to be avoided and rejections to be virtually eliminated.

Thanks to our production processes, which are always up to date and guaranteed, you – and your customers – will also benefit from optimum performance and maximum production quality.

Intensive exchange of expertise

Because our partnerships are not a one-way street, we believe that cultivating an active dialog with you is important. We incorporate your input and ideas into further developing our products and production processes. We share procedural improvements to our assembly process with our verified partners as this is the only way we can be sure that we – and you, our partner – will continue to lead the way in the future in terms of both technology and quality.

***"It is not least
our customers' trust that
makes us
a good partner."***

Stability – the basis for development.

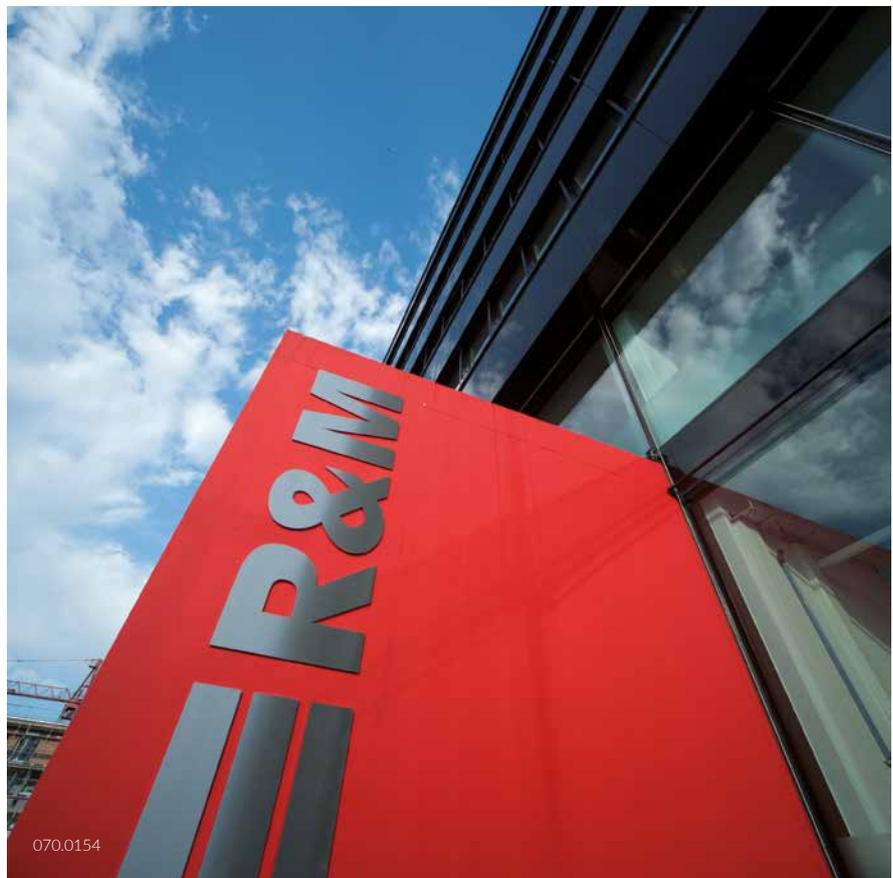

"The security of knowing that R&M will still be around in 10 years is a good feeling."

Swiss values

In uncertain times, qualities such as consistency, integrity, and trust take on much greater significance. At R&M, we have always been committed to these values. Founded over 50 years ago by the Swiss pioneers Hans Reichle and Renato De-Massari, R&M has not only held its own in a highly competitive market but has also developed over the years into a strong global company.

We know the importance of stability in our business, because only a sound political and economic environment offers sufficient scope and potential for innovation and entrepreneurship. Let us benefit from this positive foundation together.

We set great store by maximum stability when manufacturing our products. Not only do we guarantee the quality of our components, we even go as far as certifying the products assembled by you. Experience shows that these certificates and test reports can help you win new customers and larger projects.

Everything from a single source: Outstanding FO connection technology

One point of contact for everything

R&M is the leading partner for manufacturing and supplying high-quality fiber-optic components. The E-2000 is our leading product for applications with high quality requirements. The LC and SC connectors also reach the same standard of quality and excellence. However, it goes without saying that you will find everything at R&M, from individual components through to complete solutions. More information can be found at www.rdm.com

Much more than just a product supplier

We see ourselves as a partner to our customers. And vice versa. This customer focus is one of R&M's core values. It is actively embraced by staff at all levels and in all markets.

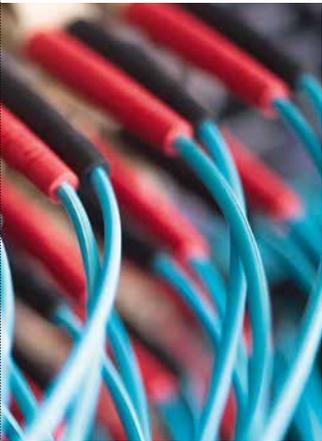

This approach creates customized solutions that are often devised together with our assembly partners – a close collaboration that leads to sustainable relationships and ultimately to greater success. For both our partners and also for our partners' customers.

And you can find out much more in a one-on-one discussion with our specialist staff.

2. SC-RJ
3. FO Field
4. LC-Duplex
5. SC-RJ
6. FO Outlet

and much more besides.

R&M –

A manufacturer and a service provider in one.

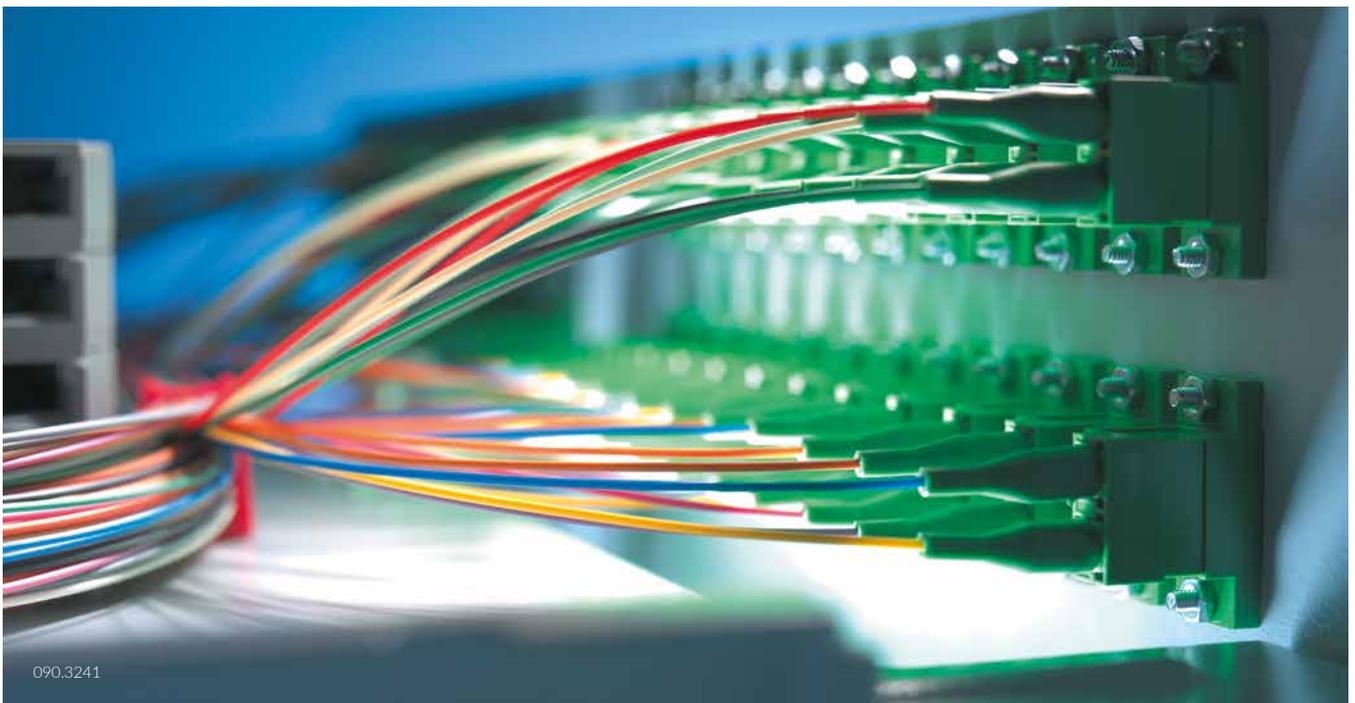

Because we understand the importance of fast access to components, we do our utmost to provide you with a correspondingly fast and flexible delivery service. This is part of what partnership means to us.

With individual training sessions led by our specialists, we help you and your staff to work even more rapidly and error-free. If you like, we will also be happy to support you with audits to evaluate potential for improvement in your processes.

R&M as a brand stands for absolute reliability – across the entire value chain. For this reason, we offer our assembly partners the chance to

have their production and processes certified regularly. This allows us to ensure and prove to end customers that our partners' work also meets R&M's high quality standards.

"Our service philosophy encompasses the entire value chain – from manufacture through to use of the components by your customer."
